

Crankshaft and Connecting Rod Bearings for John Deere Powertech® Engines.

For ease of manufacture and increased durability, many OE's and aftermarket suppliers are transitioning to the use of cast iron crankshafts with undercut and rolled fillets. A prime example of this is the John Deere Powertech Series, including the 4.5, 6.8, and 8.1 liter engines.

Crankshafts with rolled fillets may not be ground as far as radius filleted crankshafts, which takes a lot of the serviceability out of them. This is the reason for the limited availability of undersize bearings for these applications:

	Main Bearing	Thrust Bearing	Rod Bearing
4.5/6.8L Powertech			
Standard	NRE65165	NRE65168	NRE65908
.010" U/S	NRE65911	NRE65912	NRE65909
8.1L Powertech			
Standard	NRE529319	NRE504198	NR525767
.011" U/S	NRE534181	NRE504199	NRE534185
.022" U/S	NRE534182	NRE504200	Not Available
