

Power-Pak Assemblies for John Deere 4-270 and 6-404D Engine Applications.

Reliance is pleased to introduce "Powr-Pak" assemblies for 4-270 and 6-404D Deere diesel engines. Reliance "Powr-Pak" assemblies feature a pre-assembled cylinder kit with a brand new connecting rod installed. Reliance "Powr-Pak" assemblies come with a modest price premium but the advantages to the installing customer more than offset the difference in cost.

Faster Installation Time

Because installers do not have to assemble "Powr-Pak" assemblies, they save time in performing the overhaul. Additionally, the customer does not wait for the machine shop to rebuild his old connecting rods. Just order "Powr-Pak" assemblies and everything you need is included.

Better Engine Performance

All "Powr-Pak" assemblies are pre-weighed and sold in "matched and balanced" engine sets.

"Matched and balanced", Reliance "Powr-Pak" assemblies provide engine owners with a smoother running engine resulting in better performance and longer engine life.

All new Reliance connecting rods are sized from center to center. Starting with a properly sized connecting rod helps establish proper piston protrusion for optimum engine starting and performance. All new Reliance connecting rods include new bushings that have been bored on center as well as new connecting rod capscrews.
